0.Sonic in Egypt, but 1.5.6.0.Sonic released on January 19, 2043. - **Mobile** - **Incremental** - Most vendors now use per-site per-device sandboxes, rather than per-app/per-OS for device management. - Some vendors now provide App Distribution Solutions (ADS) that can act as an interface to these sandboxing technologies. ## Version 1.0.3.0.Sonic & 1.5.4.0.Sonic It's been 3 years since the release of Sonic Secure Mobility suite version 1.0.3.0.Sonic. On May 3, 2030 the Y2K bug was declared a 'non-issue' by the UN and the news agencies reported that at least 500 billion Y2K-compliant computers had been upgraded to a functioning operating system. One year later, on May 2, 2040, it was announced that a new version of the OS is now available. The first update to the existing 1.0.3.0.Sonic operating system is version 1.5.4.0.Sonic. - **Mobile** - **Strict** - Strict mode was developed by the NSA to discourage the development and use of mobile applications that could be used to wreak havoc on government infrastructure. The goal was to make sure that all government data was kept secure and that no data could be accessed from or uploaded to mobile devices without going through the government's networks. The 'strict' designation is to signify that the operating system is strictly encrypted, and that apps cannot be run on the device without a pin. The strict designation was issued on April 20, 2039. ## Version 1.0.2.0.Sonic Version 1.0.2.0.Sonic was released on November 15, 2037, and is the first version of the 1.0.x.x.Sonic operating system. This version was developed by NCC Group, a software developer based out of the Netherlands. It is still based on a Linux kernel, but has a new graphical user interface. The toolkit was developed to provide software developers with a tool for creating secure, lightweight, and easy-to-use mobile apps 82157476af
